

17th International Mineral Processing Symposium is Being Held under the Supervision of the Republic of Türkiye Ministry of Energy and Natural Resources

Organized under the supervision of the Republic of Türkiye Ministry of Energy and Natural Resources, IMPS'22 will gather the representatives of the industry at Tuyap Palas on 15-17 December 2022.

The International Mineral Processing Symposium was first held in 1986 and since then it has biennially been organized by the 5 renowned universities in Türkiye sequentially. This year, the International Mineral Processing Symposium will be jointly hosted by Mineral Processing Department at Istanbul Technical University, the Turkish Mining Development Foundation and Tuyap.

All Processes of Mineral Processing Will Be Discussed at the Symposium

The sessions of the symposium will include research subjects related to ore characterization, analytical techniques, comminution and size classification, physical-physicochemical-chemical processes, waste disposal and management, recycling, secondary recovery, automation, modelling, simulation and other connected fields.

The symposium will bring together distinguished engineers and scientists specialized in the field as well as leading manufacturers and their representatives to discuss scientific and technical developments and innovations on different platforms. Today, mining industries face constantly increasing production costs and difficult-to-process complex ores, thus the symposium will provide a ground where the development of much more efficient processes, sustainable operations, effective usage of resources, technical and scientific requirements are discussed.

The Synergy of the Fair and Symposium Will Lead the Industry

The most important fair of the mining industry, Mining Türkiye, will be organized for the first time this year in Tuyap Exhibition and Congress Center, which also includes the Tuyap Palas, simultaneously with the International Mineral Processing Symposium.

All the machinery, equipment, services, and information they need in the processes of finding, extracting and processing mines will be available to all the companies providing services in the mining industry and the representatives of the industry at his platform where two major events will be held together.
